

IN THE CLAIMS:

Please cancel Claims 13, 28 and 43 without prejudice or disclaimer of subject matter, and please amend the claims as shown below. The claims, as pending in the subject application, read as follows:

1. to 11. (Canceled).

12. (Currently Amended) An access system for accessing an address, comprising:

an operation device for outputting a control command of a direction of an image pickup device;

a receiving device for receiving an image picked up by the image pickup device which is controlled based on the control command of the direction of the image pickup device and information on an area corresponding to the direction of the image pickup device which is controlled on the basis of the control command; and

a control device for extracting an address corresponding to a predetermined image included in the image received by said receiving device; determining whether the image received by said receiving device includes a predetermined image based on the information on the area corresponding to the direction of the image pickup device, and for executing processing for accessing an address corresponding to the predetermined image by referring to a memory storing an address corresponding to the picked-up image, corresponding to the result of the determination

a monitoring device for monitoring whether the image received by said

receiving device includes a predetermined image; and
an accessing device for accessing the address extracted by the control device
corresponding to the predetermined image if the monitoring device monitors that the
received image includes the predetermined image and a user performs an operation to
designate the predetermined image.

13. (Canceled)

14. (Original) An access system according to Claim 12, wherein the address includes a URL.

15. (Original) An access system according to Claim 12, wherein the address includes an email address.

16. to 26. (Canceled).

27. (Currently Amended) A method for accessing an address, comprising the steps of:

outputting a control command of a direction of an image pickup device;
receiving an image picked up by the image pickup device which is controlled based on the control command of the direction of the image pickup device and information on an area corresponding to the direction of the image pickup device which is controlled on the basis of the control command;

monitoring whether the image received by the receiving step includes a predetermined image;

extracting an address corresponding to the predetermined image included in the image received in said receiving step determining whether the received image includes a predetermined image based on the area corresponding to the direction of the image pickup device; and

executing processing for accessing an address extracted by the extracting step corresponding to the predetermined image if the monitoring step monitors that the received image includes the predetermined image and a user performs an operation to designate the predetermined image by referring to a memory storing an address corresponding to the picked-up image, corresponding to the result of the determination.

28. (Canceled)

29. (Original) An access method according to Claim 27, wherein the address includes a URL.

30. (Original) An access method according to Claim 27, wherein the address includes an email address.

31. to 41. (Canceled).

42. (Currently Amended) A computer-readable storage medium on which

is stored storing a computer-executable program for executing an operational processing a method of an access system for accessing an address, wherein the program comprises:

program code of an outputting step of outputting a control command of a direction of an image pickup device;

program code of a reception step of receiving an image picked up by the image pickup device which is controlled based on the control command of the direction of the image pickup device and information on an area corresponding to the direction of the image pickup device which is controlled on the basis of the control command;

program code of a monitoring step of monitoring whether the image received by the reception step determination step of determining whether the received image includes a predetermined image based on the area corresponding to the direction of the image pickup device;

program code of an extracting step of extracting an address corresponding to the predetermined image included in the image received by the reception step; and

program code of an access step of executing processing for accessing an the address extracted in the extracting step corresponding to the predetermined image if the monitoring step monitors that the received image includes the predetermined image and a user performs an operation to designate the predetermined image by referring to a memory storing an address corresponding to the picked-up image, corresponding to the result of the determination.

43. (Canceled)

44. (Currently Amended) A computer-readable storage medium according to Claim 42, wherein the address includes a URL.

45. (Currently Amended) A computer-readable storage medium according to Claim 42, wherein the address includes an email address.
